

Who's Most Likely to Leave?

An interactive HR attrition dashboard designed to answer one core question: **where is turnover concentrated, and where should HR focus first?** Covering 1,480 employees across departments, roles, demographics, and work patterns.

Dashboard at a Glance

Six interactive views move from workforce-wide context down to segment-level risk factors — hover for exact values, zoom, and explore patterns visually.

Top KPIs

Headcount, attrition rate, average income, and average age — instant workforce context.

Demographics

Age, overtime, travel frequency, and salary slab — key retention signals.

Department & Role Views

Is attrition company-wide or concentrated in specific teams and job roles?

Interactive Exploration

Hover, zoom, and drill into patterns rather than scanning raw tables.

Workforce Baseline: The KPI Cards

Four headline metrics establish context before diving into segment-level analysis.

1,480

Total Employees

16.1%

Attrition Rate

High enough to warrant active retention monitoring

\$6,505

Avg. Monthly Income

36.9

Years

Department Attrition: Sales Leads the Way

Department

A Concentrated Problem

Sales leads at **20.7%**, followed by HR at **19.0%**. R&D trails at **13.8%**. Customer-facing and people-intensive functions are bearing the heaviest turnover burden — this is not a company-wide pattern but a targeted one.

Job Roles: Sales Representatives Are the Standout Risk

At **39.3%**, Sales Representatives are leaving at nearly **2.5× the company average** – the single highest-risk role by a wide margin.

Age & Overtime: Two of the Strongest Signals

Early-Career Employees Are the Most Unstable

Attrition peaks at **35.8%** for ages 18–25, then drops sharply. Onboarding quality, career clarity, and manager support are likely pressure points.

Overtime Is a 3× Risk Factor

Employees working overtime leave at **30.6%** vs. **10.4%** for those who don't — roughly **3× higher**. Workload and burnout are major contributors.

Travel & Salary: Compounding Retention Risks

Travel Pattern

More Travel = Higher Attrition

Frequent travelers leave at **24.7%** — more than **3× the rate** of non-travelers (**7.9%**). Disruptive schedules are a clear retention risk.

Lower Pay, Higher Churn

The lowest salary slab (under \$5K/month) churns at **21.6%**, while the highest earners (\$15K+) leave at just **3.8%**. Compensation pressure is a meaningful driver, especially for junior roles.

The Profile of an Employee at Risk

Attrition is not evenly distributed. The data reveals a consistent, compounding risk profile across multiple dimensions.

Younger

Ages 18–25 leave at 35.8% – nearly 4× the mid-career rate

Lower Paid

Under \$5K/month salary slab has 21.6% attrition vs. 3.8% for top earners

Working Overtime

30.6% attrition rate – roughly 3× higher than non-overtime employees

Traveling Frequently

24.7% attrition for frequent travelers, driven by schedule disruption

In Sales or Frontline Roles

Sales Representatives lead all roles at 39.3% – 2.5× company average

Recommended Actions: Where to Start

These five priorities target the highest-impact segments identified in the analysis.

1

Sales Representative Retention

Launch targeted programs for the 39.3% attrition rate in this role.

2

Overtime & Workload Reduction

Address the 3× attrition gap between overtime and non-overtime employees.

3

Early-Career Support (Ages 18–25)

Improve onboarding, career clarity, and manager support for the highest-risk age group.

4

Compensation Review – Lowest Salary Slab

Review pay for employees under \$5K/month, where attrition hits 21.6%.

5

Travel-Heavy Role Redesign

Reassess travel expectations and increase manager support for frequent travelers.

What Comes Next: From Descriptive to Predictive

Current State: Strong Patterns, Descriptive Only

These findings show **where** attrition is concentrated — but not definitive causation. The next step is deeper driver analysis.

- Attrition by manager tenure
- Job satisfaction and work-life balance scores
- Predictive attrition modeling
- Correlation and feature importance analysis

Next-Level Dashboard Capabilities

- Interactive filters by department, role, and tenure
- Predictive risk scores for individual employees
- Trend tracking over time
- Executive-ready summary views

 A predictive attrition model would identify the strongest statistical drivers — moving from "what's happening" to "who will leave next."
